Millcreek Engineering Company in Collaboration with **Benetech USA** has developed a **Shallow Rail Unloading System**.

21 North Design Services, LLC(21NDS) participated in the development of the **Shallow Rail Unloading System**. **21NDS** modeled and ran the **Shallow Rail Unloading System** through material flowability physics tests, and determined the optimum configuration for the system.

The **Shallow Rail Unloading System** has been developed for locations that require a shallow pit for rail unloading such as those with a high water table.

For more information, please contact any of the three above companies.
